

## How to Add Home Screen Icons for the Android

Got a favorite website you're constantly checking on your Android device? You can pin it to your Home Screen, and it will appear just as any other native icon. This allows quick launching with a single tap.

In this example we will use Android 4.1 with Chrome, but the process will be similar on different versions, as well.

*The main idea is to create a Bookmark to the URL, and add the Bookmark to the Home Screen.*

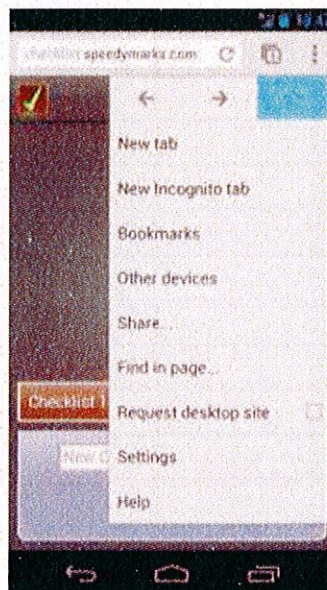

### Open Your Browser

We recommend using the default Android Browser, or Google Chrome if possible. Open the page in your browser you want to save as an icon.

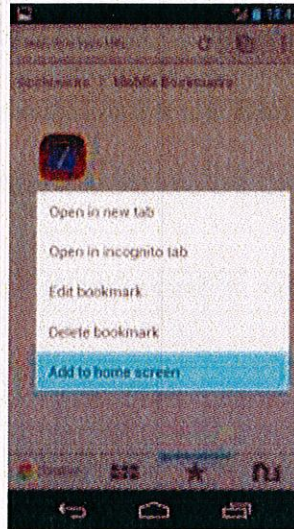

### The Menu Button and Bookmarks

Hit the Menu button, and add the page to your Bookmarks. In Chrome, just tap on the star and follow the prompt.

### **Add to Home Screen**

Open your Bookmarks using the Menu button, and find the new Bookmark you have just added. Press down and hold on the Bookmark until you see an Action Menu. Select Add to Home Screen.

That's all there is to it. The Bookmark is pinned to the Home Screen for quick access. Arrange it into the place of your liking.
